# Pests of rice – Yellow stem borer

The caterpillars bore into the rice stem and hollow out the stem completely. Attacked young plants show dead hearts and older plants show white heads. Often plants break where the stem is hollowed out causing lodging.

Serious outbreaks of Yellow Stem Borer are very rare.

**Resistant varieties**

- Resistant varieties are not available

**Effective control methods**

- Use of proper land preparation techniques to destroy plant debris
- Use of proper weed management methods
